ANUJKUMAR YADAV

Full Stack Software Engineer

Mumbai, India | +91 7900135968 | anujf0510@gmail.com | linkedin.com/in/anujkumaryadav05 | github.com/anuj-kumary

PROFESSIONAL SUMMARY

Full stack engineer with 4 years of experience building data heavy React and TypeScript products, currently owning the **Governance domain at Collate (OpenMetadata)**, where I built the workflow builder and access request systems that now run **10,000+ governance workflows** in production. **250+ pull requests merged** as an open source contributor to OpenMetadata (15k+ GitHub stars), spanning governance tooling, data lineage, and platform infrastructure. Delivered production features for **Uber** (cut load time by **~70%**) and **StarTree** (UI overhaul spanning a growth stretch from **$500K to $4M+ ARR**), taking each feature from data model through UI to production, and working into Node.js, PostgreSQL, gRPC, and WebSockets whenever the product needed it. I review code regularly, mentor newer engineers on React and TypeScript, and have a consistent record of cutting regressions through disciplined Playwright/Cypress coverage and closing performance gaps through hands on profiling.

TECHNICAL SKILLS

Frontend: React, Next.js, TypeScript, JavaScript (ES6+), React Native (Expo), Redux, Redux Toolkit, Zustand, TanStack Query/Form, Tailwind, Material UI, Ant Design (AntD)

Data Visualization & Interaction: React Flow, Ant G6, virtualized lists, schema driven forms

Performance: Browser profiling and DevTools, render tuning, code and bundle splitting, lazy loading, eliminating unnecessary re renders

Testing: Playwright, Cypress, Jest, React Testing Library, E2E test architecture

Backend & Real Time: Node.js, Express, PostgreSQL, MongoDB, REST, gRPC, WebSockets, Kafka, JWT & RBAC auth

Build & DevOps: Docker, GitHub Actions, Webpack, Babel, Git, Vercel, Firebase

AI Assisted Development: OpenAI Codex, Claude Code, GitHub Copilot, Cursor, MCP

WORK EXPERIENCE

Software Engineer — Deuex Solutions Pvt. Ltd. **Jul 2022 – Present**
Mumbai, India

Collate

- Own feature delivery in the **Governance domain** of OpenMetadata, an open source data catalog used by enterprises for metadata management and lineage, alongside paid tier feature work for Collate.
- Built the **governance workflow builder** on React Flow, a node based canvas where admins assemble triggers, conditions, and actions (glossary approval, table/dashboard certification) into custom approval workflows with no code. Runs **10,000+ governance workflows** today and cut manual configuration effort by roughly 60 to 70%.
- Built the **Ontology Explorer** on Ant G6, rendering a company's glossary as an interactive knowledge graph — parent/child hierarchies, relationship filtering, hierarchical/circular layout switching, and PNG/SVG/RDF export. Shipped to all paid clients.
- Owned the **Data Access Request** feature end to end: the request form (dataset, access type, permission level, time bound access, business justification), the owner approval/rejection flow, automatic provisioning through policy agents where configured, and the full audit trail of who requested, approved, granted, and revoked access.

Uber

- Migrated a legacy React class component codebase to TypeScript functional components with hooks, backed by new unit test coverage that cut recurring stale state bugs.
- Drove a full product revamp introducing **TanStack Query** for data caching and **TanStack Form** for form state, plus a schema driven rendering setup so backend engineers could add or change fields by updating a schema alone, with no frontend changes required.
- Built the Playwright end to end suite covering core workflow and form management flows, catching regressions before rollout.
- Cut initial load time from roughly 30 seconds to 9 seconds (**~70% faster**) through code splitting, lazy loaded routes, and removing unnecessary re renders, while also improving accessibility across the app.

StarTree

- Owned modules within the Data Manager product end to end — interface down to data flow — and introduced Zustand for scoped, lightweight state management.

- Partnered with Product and UX on a full UI overhaul during a stretch when ARR grew from **$500K to $4M+**.
- Built out Cypress end to end coverage across the product, sharply cutting the regression count slipping into releases and making shipping safer for the whole team.
- Defined shared React and Redux/Zustand patterns later adopted as team wide conventions, reducing back and forth on state management decisions in code review.

GoodBug

- Worked full stack on a React Native health tracking app with Node.js/Express APIs on PostgreSQL, shipping multiple tracking modules end to end (water intake, sports activity, physical activity, swimming).
- Designed the RBAC model and login/signup flow, with all APIs secured behind JWT based token authentication.
- Managed this engagement alongside the concurrent Uber engagement, coordinating priorities and communication across both client teams.

The 12th Men

- Built the React Native (Expo) frontend and Node.js/Express backend for live ball by ball cricket scoring and IPL style player auctions with real time bidding, purse tracking, and countdown timers.
- Designed the WebSocket architecture so scoring and auction updates reach connected screens in real time while persisting reliably to the backend.
- Expanded the product beyond cricket to pickleball and badminton, adding tournament management, fixtures, standings, and fantasy leagues, and fixed scroll performance with virtualized lists plus Firebase push notifications.

Other Internal Contributions

- Independently designed and built Giverbox, a React Native giveaway hosting app, covering the full CRUD feature set, push notification delivery, wishlist management, and location based discovery of nearby giveaways.
- Delivered core employee onboarding functionality for HRMS, an internal HR platform, including document upload workflows and end to end type safety across forms and data flow.

OPEN SOURCE PROJECTS

- **OpenMetadata — Core Contributor, 250+ merged PRs.** Governance workflow builder, Ontology Explorer, Data Access Request, and broader platform contributions.
- **react-native-toastify-expo —** Published, type safe npm package for toast notifications on React Native and Expo, with animations and auto dismiss.
- **Code Snippet Builder —** Merged pull requests improving keyboard accessibility and visual consistency in an open source developer tool.

EDUCATION

B.E. in Information Technology, Savitribai Phule Pune University | 2017 – 2022 | GPA: 9.2 / 10

AWARDS & RECOGNITION

- Standout Performer, Deuex Solutions — Aug 2025
- Standout Performer, Deuex Solutions — Aug 2024
- Fresher of the Year, Deuex Solutions — Sep 2023
