Anujkumar Yadav

Full Stack Software Engineer

anujf0510@gmail.com | +91 7900135968 | Mumbai, India | linkedin.com/in/anujkumaryadav05 | github.com/anuj-kumary

Summary

Full-stack engineer with **4+ years** of experience building web and mobile products with **TypeScript, React, React Native, and Node.js**. Core contributor to **OpenMetadata** (450+ merged PRs), where I build governance features for Collate's enterprise customers: the no-code workflow builder, Data Access Requests, Ontology Studio, and Column Bulk Operations. Strong in frontend performance, real-time event-driven systems, and reliable end-to-end testing. Regularly review code and mentor newer engineers.

Skills

Languages: JavaScript (ES6+), TypeScript, SQL
Frontend: React, Next.js, React Native (Expo), Redux, Zustand, TanStack Query/Form, Tailwind CSS, React Aria, MUI, Ant Design
Backend & Real-Time: Node.js, Express, REST APIs, WebSockets, event-driven architecture, JWT, RBAC
Databases: PostgreSQL, MongoDB
Cloud & DevOps: AWS, Docker, GitHub Actions, Firebase Cloud Messaging, Vercel, Webpack, Babel, Git
Testing: Playwright, Cypress, Jest, React Testing Library, end-to-end test architecture
Performance: Chrome DevTools profiling, render optimization, code splitting, lazy loading, list virtualization
Visualization & UI Architecture: React Flow, Ant G6, schema-driven forms, design-system components
AI-Assisted Development: Claude Code, GitHub Copilot, Cursor, MCP

Experience

Software Engineer Jul 2022 – Present
Deuex Solutions Pvt. Ltd. – product engineering for Collate, Uber, StarTree, and others *Mumbai, India*

Collate (OpenMetadata)
React, TypeScript, Tailwind CSS, React Aria, React Flow, Ant G6, Playwright

- Own feature delivery in the **Governance** domain of OpenMetadata, an open-source data catalog used by enterprises for metadata management and lineage, and build paid-tier features for Collate.
- Built the **no-code governance workflow builder** on React Flow, a node-based canvas where admins compose triggers, conditions, and actions (glossary approval, asset certification) into approval workflows.
- Owned the frontend of **Data Access Requests**: request form, approve/reject flow with a lifecycle view, time-bound access, and a full audit trail, integrated with backend policy agents that grant and revoke access on source systems.
- Built the **Ontology Explorer** on Ant G6, rendering a company's glossary as an interactive knowledge graph, and the review flow where data stewards accept or reject AI-proposed terms and relationships.
- Built **Column Bulk Operations**, letting data stewards find columns across all tables and update descriptions, tags, and glossary terms in a single action.
- Stabilized the **Playwright** suites for workflows and Data Access Requests by fixing the root causes of CI flakes (search-index timing, refetch races) instead of adding retries, and migrated the Automations UI from Ant Design to the in-house Tailwind and React Aria component library.

Uber
React, TypeScript, TanStack Query/Form, Playwright, Jest

- Cut initial load time from **~30s to ~9s** through route-level code splitting, lazy loading, and removing unnecessary re-renders, while improving accessibility across key flows.
- Led a product revamp introducing **TanStack Query** for data caching and **TanStack Form** for form state, with **schema-driven rendering** so backend engineers could add or change fields by editing a schema.
- Migrated a legacy React class-component codebase to **TypeScript functional components with hooks**, adding unit tests that reduced recurring stale-state bugs.
- Built the **Playwright end-to-end suite** covering core workflow and form-management flows, catching regressions before rollout.

StarTree

React, TypeScript, Redux, Zustand, Cypress

- Owned modules of the **Data Manager** product end-to-end, from UI to data flow, and introduced **Zustand** for scoped, lightweight state management.
- Partnered with Product and UX on a full UI overhaul during the company's high-growth phase.
- Built **Cypress end-to-end coverage** across the product, reducing regressions reaching production releases.
- Defined shared React and Redux/Zustand patterns that the team adopted as conventions, reducing back-and-forth in code review.

The 12th Men

React Native (Expo), Node.js, Express, WebSockets, PostgreSQL, Firebase

- Built the mobile app and backend for **live cricket scoring and IPL-style player auctions** with real-time bidding.
- Designed an **event-driven WebSocket architecture** that pushes live score and auction updates to every connected user.
- Extended the platform to pickleball and badminton with tournaments, standings, and fantasy leagues.

GoodBug

React Native, Node.js, Express, PostgreSQL, JWT

- Worked full-stack on a React Native health-tracking app: designed **Node.js/Express REST APIs on PostgreSQL** and shipped tracking modules end-to-end (water intake, sports, physical activity, swimming).
- Designed the **RBAC model** and signup/login flows, securing all APIs with **JWT-based authentication**.
- Ran this engagement in parallel with Uber, managing priorities and communication across both client teams.

Internal Products

React Native, TypeScript, Firebase

- **Giverbox:** Designed and built a React Native giveaway-hosting app with full CRUD, push notifications, wishlists, and location-based discovery of nearby giveaways.
- **HRMS:** Delivered employee onboarding for the internal HR platform, including document-upload workflows and end-to-end type safety across forms and data flow.

Open Source

OpenMetadata – Core Contributor *(open-source data catalog, 15k+ GitHub stars)*

- **450+ merged PRs** across governance workflows, Data Access Requests, Ontology Studio, Column Bulk Operations, and core platform UI.

react-native-toastify-expo *TypeScript, React Native, npm*

- Published a type-safe npm package for toast notifications in React Native and Expo, with animations and auto-dismiss.

Code Snippet Builder

- Merged PRs improving keyboard accessibility and visual consistency in an open-source developer tool.

Education

B.E. in Information Technology, Savitribai Phule Pune University, Pune 2017 – 2022
GPA: 9.2/10

Awards

- Standout Performer, Deuex Solutions – Aug 2024 and Aug 2025
- Fresher of the Year, Deuex Solutions – Sep 2023
